The updated and revised second edition of the *Teaching Reading Sourcebook* combines the best features of an academic text and a practical hands-on teacher’s guide. It is an indispensable resource for teaching reading and language arts to both beginning and older struggling readers.

### WHAT? • WHY? • WHEN? • HOW?

**What?**

A thorough but concise graphic explanation of research-based content and best practices

**Why?**

A readable summary of scientifically based research, selected quotes from researchers, and a bibliography of suggested reading

**When?**

Information about instructional sequence, assessment, and intervention strategies.

**How?**

Sample lesson models with suggestions for corrective feedback; providing a bridge between research and practice, and making explicit instruction easy.
With a telescope, you can see details like the craters of the moon. You can also use a telescope to find out the locations of the other planets and stars. It is interesting to study the night sky like the astronomers have done for many years. The first telescopes were used in the 1600s, when people began to study the planets more closely. Today, telescopes are used by astronomers all over the world to study the stars and planets. They use telescopes to find new planets and stars that were not discovered before. A telescope is a great tool for anyone who is interested in astronomy.
